

●NCC (Nihon Ceratec Cleaning)

•NCC is our original cleaning technology which many ceramics manufacturing companies recommend.

The dirt such as dust in a pore of ceramics or AlF₃ of a reaction product was conventionally considered that nobody could remove. But, now we can do it by NC cleaning without damaging ceramics itself.
Our high technology and quality must cause your yield improvement and cost reduction.

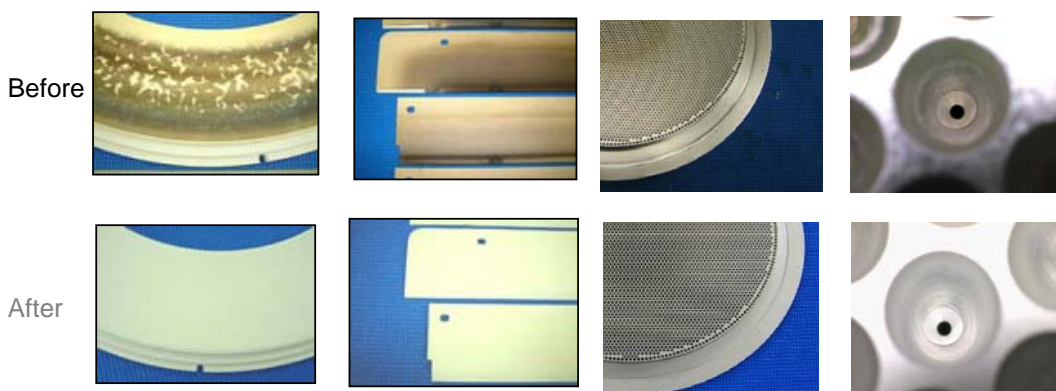

We accept your order of refreshment processing by surface reforming of a ceramic part, control of surface coarseness.

●Feature

Non-damage and good finish like as new one
Perfect removing AlF₃ and depo and so on
Reduction of dust in process chamber and shortening preparing time.

●Example of materials

1. Ceramics
Al₂O₃ 96%~99.99% · Al₂O₃ 99.9%(HIP) · Sapphire · Quartz · Si₃N₄ · SiC
AlN (Possibly, a change of color occurs in materials characteristic)
2. Resin
Teflon · Vespel
3. Metal
Al(aluminum) · SUS(stainless steel)
